

AMENDMENT TO THE SPECIFICATION

*Page 4 of the substitute specification--add one new paragraph after the first full paragraph and section entitled **DESCRIPTION OF EXEMPLARY EMBODIMENTS** (beginning at line 11).*

The invention essentially connects motor vehicles, their owners, and/or their drivers to individuals, institutions, or other things that want to contact them by way of the motor vehicle's license plate digits. The invention makes such connectivity possible through an "electronic mail" ("e-mail") repository whereby motor vehicles can be assigned email address accounts according to their license plates. The invention makes such connectivity possible through Uniform Resource Locator (URLs) addresses located on the Internet, which URLs can be assigned to motor vehicles according to their license plate numbers. The invention makes such connectivity possible through an Internet "instant messenger" ("IM") whereby a motor vehicle can be contacted according to the username it is assigned according to its license plate. The invention makes such connectivity possible through telephone systems that make motor vehicles contactable by a means of dialing up the license plate. The invention makes such connectivity possible by other systems and devices that enable instant communication between a motor vehicle and other things around it. The invention makes such connectivity possible through address-algorithms for each of the said methods of enable motor vehicle connectivity.
